

**Define
Chemistry
Requirements**

Built in chemical intelligence interfaces and adheres to corporate structure registration rules.

**Submit RFQ
to Vendors**

KSRS facilitates secure communication between vendors, individuals, project groups, and departments during the RFQ process.

Select Vendor

System tracks vendor's bids, internal vendor ratings, past vendor performance, and financials. It assists you in selecting the best bid.

KSRS Overview

**Communicate
During Production**

The KSRS allows total customization of the flow of information and data files. This ensures appropriate people in your company have direct communication with vendors during production.

**Receive
Synthesized Lots**

The requesting department in your company receives the synthesized lots, and closes the project.

We Understand Your Business

Founded in 2000, Kelaroo is a leader in the development and design of cheminformatics and bioinformatics applications. Our core strength is in developing products that leverage pharmaceutical and biotechnology companies drug discovery data.

Innovation at Kelaroo is driven both by a deep understanding of our client's scientific and business processes, and a commitment to developing products that create cost and time savings for our clients. Scientific and process innovation extends through all aspects of our products. Each product is chemically and scientifically "aware" so users can search, store, and retrieve data in its native chemical form. Features like this ensure our products will integrate with your existing scientific information systems and processes

KSRS
Kelaroo Synthesis Request System

Streamlining the Chemistry Outsourcing Process

KSRS Overview

The Kelaroo Synthesis Request System is a sophisticated web-based application that manages every aspect of the chemistry synthesis outsourcing process. Our system integrates all areas of this process, with significant cost and time savings.

The KSRS utilizes our proprietary software, which is chemically aware. It provides full structure and substructure searching, and interfaces seamlessly with your current normalization and standardization rules.

Our system streamlines the chemistry synthesis outsourcing process in a way that is not possible with traditional methods. Imagine being able to issue RFQs, receive quotes from selected vendors, issue an award, track vendor progress, and ensure you receive exactly what you requested. Furthermore, imagine that during this entire process the appropriate personnel from your company are able to communicate efficiently with vendors and internal project teams. With the KSRS all of this and more is now a reality.

The KSRS Advantage

One of the biggest challenges many companies face is getting the right information to the right people at the right time. Our system handles all of this effortlessly. It automatically directs messages to the correct people, and minimizes information overload that drains valuable company resources.

Another important feature is ease of access. The KSRS is entirely web based, and is designed with usability in mind. At Kelaroo, we are driven to produce software that will save you time and money, but doesn't require costly training to use. You will be amazed at how simple and intuitive the whole process is. A complete online help system is also included.

Security is not compromised by the ease of access of the KSRS. Our system utilizes a highly secure platform with multiple redundancies. This ensures no unauthorized access, and protects your intellectual data. In addition, all communication sent internally and to vendors is securely encrypted.

Features

- ◆ Issue RFQs and award jobs
- ◆ Chemically aware with live structures and compatible with all chemical data cartridges
- ◆ Sdfile uploading, exporting, and list management
- ◆ Structure normalization and standardization of individual compounds or entire libraries
- ◆ Organization and association of contracts and legal agreements with vendors
- ◆ Secure and private communications
- ◆ Tracking and association of QC results
- ◆ Management of users and privileges
- ◆ Creation of preferred vendor lists, and internal vendor ratings
- ◆ Financial reporting, cost center, and spend analysis
